

To whom it may concern:

I would like to make my opinion heard in this impending decision of whether or not to continue to use animals in toxic testing trials. I believe that NIEHS should adopt the new non-animal test methods IMMEDIATELY. The non-animal test methods have been considered for almost 20 years, and animals should not continue to suffer and die because of bureaucratic inertia. Government agencies should use in vitro cell culture tests to COMPLETELY REPLACE the use of animals in lethal dose tests. At a minimum, ALL government agencies that currently require the acute animal-poisoning studies should IMMEDIATELY incorporate the in vitro cell culture method as a transitional means of reducing the number of animals killed and should fully support the use of this method as an eventual REPLACEMENT for lethal-dose poisoning studies. In particular, the EPA must immediately incorporate the non-animal cell culture method into its HPV chemical program. Thank you for giving me a chance to air my concerns.

Ms. Sandra L. Carson
